US-09-270-767-32183
Sequence 32183, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 32183
LENGTH: 117
TYPE: PRT
ORGANISM: Drosophila melanogaster
                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND ACID SEQUENCES RELATING TO C

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196,132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to Parkin protein and its corresponding nucleic corresponding nucleic acid sequence. The nucleic acid sequence is useful for altering the proteolytic processing of Parkin at its potential cleavage site at Asp CC proteolytic processing of Parkin at its potential cleavage site at Asp CC composition for treating and/or preventing or testing a pharmaceutical CC composition for treating and/or preventing a neurological disorder, e.g. CC occurrence of proteolytic processing of Parkin at Asp 126 in a sample, in CC monitoring a potential disposition for a neurodegenerative disease, and CC neurodegenerative disorders. The viral vector is used for transforming cc neuronal cells in vivo or ex vivo. The invention is useful for correcting assays to identify compounds that increase or decrease corrections. It is also used in gene therapy. The present sequence is human CC Parkin protein

                                                                                                       밁
                                                                                                                                  ક
                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                             The invention relates to identifying (M1) a candidate p53 pathway cc modulating agent, by contacting an assay system comprising a purified HM copypeptide (human orthologue of genes that modify the p53 pathway in cc Drosophila) or nucleic acid with a test agent under conditions, where but cf for the presence of the test agent, the system provides a reference cc activity, and detecting a test agent, the system provides a reference cl contacting a cell defective in p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator cl that specifically binds to a HM polypeptide comprising an HM amino acid contacting a cell (comprising contacting the cell with an agent that a petifically binds an HM polypeptide comparising (M3) a p53 pathway cf a disease in a patient (comprising: (a) obtaining a biological sample cf from the patient, (b) contacting the sample with a probe for HM comparison indicates a likelihood disease). (M1) is useful contacting the cell with a probe for HM contacting the results with a control; and (d) determining contacting the p53 pathway. A probe for HM expression is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 % expression level. Condulators identified by (M1) are useful in a variety of diagnostic and therapeutic applications, where disease or disorder prognosts is related to defects in the p53 pathway. A probe for HM expression condulating the p53 pathway of a cell, thus restoring the p53 pathway of a cell, thus restoring the p53 pathway of a cell, thus restoring conduction of the cell, so that the cell undergoes normal conduction of the cell, so that the cell undergoes normal conduction of the cell, so that the cell undergoes normal conduction of the cell proliferation disorders. The present sequence

```

The invention relates to Parkin protein and its corresponding nucleic acid sequence. The nucleic acid sequence is useful for altering the proteolytic processing of Parkin at its potential cleavage site at Asp 126. The invention is used in manufacturing or testing a pharmaceutical composition for treating and/or preventing a neurological disorder, e.g.

It also used for detecting the occurrence of proteolytic processing of Parkin at Asp 126 in a sample, in for treating, preventing and/or disgnosing Parkinson's disease, and neurodegenerative disorders. The viral vector is used for transforming neurodegenerative disorders. The viral vector is used for transforming neuronal cells in vivo or ex vivo. The invention is useful for neurotransplantation into the CNS of a mammal. It may be used in apoptosis. It is also used in gene therapy. The present sequence is huma Parkin mutant protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

This sequence is a variant of the parkin gene found in parkinson's disease patients. The sequences may be used for the diagnosis, treatment (including gene therapy) and investigation of Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 437 AA;

                                                                                                                             밁
                                                                                                                                                                 र्
                                                                                                                                                                                                                                                                                                                                CC modulating agent, by contacting an assay system comprising a purified HM CC polypeptide (human orthologue of genes that modify the p53 pathway in CC brosophila) or nucleic acid with a test agent under conditions, where but CC for the presence of the test agent, the system provides a reference CC activity, and detecting a test agent-biased activity of the assay system. CC also included are modulating (M2) a p53 pathway of a cell (comprising CC contacting a cell defective in p53 function with a candidate modulator that specifically binds to a HM polypeptide comprising an HM amino acid CC sequence, where p53 function is restored), modulating (M1) a p53 pathway CC in a mammalian cell (comprising contacting the cell with an agent that CC specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising: a) obtaining a biological sample CC from the patient; (b) contacting the sample with a probe for HM corporation; (c) comparing the results with a control; and (d) determining CC whether the comparison indicates a likelihood disease). (M1) is useful CC whether the comparison breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 % expression level. CC Modulators identified by (M1) are useful in a variety of diagnostic and CC to defects in the p53 pathway. A probe for HM expression CC contaction of the cell, so that the cell undergoes normal CC proliferation of spotters (e.g. cancer). Another two new methods (M2 and CC M3) are useful for modulating the p53 pathway of a cell, thus restoring CC proliferation or progression through the cell cycle. (M2) and (M3) are calculating defects in the p53 pathway such as angiogenic, CC apoptetic or cell proliferation disorders. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               272
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         212
```

The present sequence represents a murine parkin2 polypeptide. Mutations or deletions in the parkin2 gene cause Parkinson's disease in humans. The human parkin2 gene is located in gene region 6q25.2-27. Parkin2 polypeptides and polynucleotides are useful for analysing neurodegenerative diseases. They are also useful for testing the efficacy of the treatment of a neurodegenerative disease such as Parkinson's disease, Alzheimer's disease, Huntington's disease, amyotrophic lateral sclerosis, Multi-system atrophy, Wilson's disease, Pick's di

The sequence contains the mutation lys161Asn. Mutations or deletions in t parkin2 gene cause Parkinson's disease in humans. The human parkin2 g is located in gene region 6q25.2-27. Parkin2 polypeptides and polymucleotides are useful for analysing neurodegenerative diseases. are also useful for testing the efficacy of the treatment of a neurodegenerative disease such as Parkinson's disease, Alzheimer's disease, Huntington's disease, amportrophic lateral sclerosis, Multisystem atrophy, Wilson's disease, Pick's disease, Prion disease, and secondary causes inducing Parkinson's syndromes like toxins, drugs, butwours, head trauma, stroke, vascular irregularities or metabolic irregularities, associated with a less active or non-active parkin

The sequence contains the mutation Thr415ABI. Mutations or deletions in t parkin2 gene cause Parkinson's disease in humans. The human parkin2 g is located in gene region 6q25.2-27. Parkin2 polypeptides and polymucleotides are useful for analysing neurodegenerative diseases. are also useful for testing the efficacy of the treatment of a neurodegenerative disease such as Parkinson's disease, Alzheimer's disease, Huntington's disease, amyotrophic lateral sclerosis, Multisystem atrophy, Wilson's disease, pick's disease, prion disease, and secondary causes inducing Parkinson's bystem of the treatment of a trumours, head trauma, stroke, vascular irregularities or metabolic irregularities, associated with a less active or non-active parkin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BUM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a murine parkin2 polypeptide. The sequence contains the mutation Trp453Stop. Mutations or deletions in parkin2 gene cause Parkinson's disease in humans. The human parkin2 g is located in gene region 6q25.2-27. Parkin2 polypeptides and polynucleotides are useful for analysing neurodegenerative diseases. are also useful for testing the efficacy of the treatment of a neurodegenerative disease such as Parkinson's disease, Alabelmer's disease, Huntington's disease, amyotrophic lateral sclerosis, Multisease, pick's disease, Pick's disease, Prion disease, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    secondary causes inducing Parkinson's syndromes like toxins, drugs, tumours, head trauma, stroke, vascular irregularities or metabolic irregularities, associated with a less active or non-active parkin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 7; Page 51-53; 62pp; English

The invention relates to identifying (M1) a candidate p53 pathway modulating agent, by contacting an assay system comprising a purified HM polypeptide (human orthologue of genes that modify the p53 pathway in Drosophila) or nucleic acid with a test agent under conditions, where but for the presence of the test agent, the system provides a reference activity, and detecting a test agent, the system provides a resay system. Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator that specifically binds to a HM polypeptide comprising an HM amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying modulators of the p53 pathway for use in or cell proliferation disorders, comprises screening modulate activity of a human ortholog of genes that metallic activity of a human ortholog of genes that metallic activity of a human ortholog of genes that metallic activity of a human ortholog of genes that metallic activity of a human ortholog of genes that metallic activities are not seen that metallic activities are not seen as a seen activities and the seen activities are not seen as a seen activities and the seen activities are not seen as a seen activities are not seen as a seen activities are not seen as a seen activities are not seen as a seen activities are not seen as a seen activities and the seen activities are not seen as a seen activities are not seen as a seen activities are not seen as a seen activities are not seen as a seen activities are not seen as a seen activities are not seen as a seen activities and the seen activities are not seen activities and the seen activities are not seen as a seen activities are not seen as a seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities and the seen activities are not seen activities activities and the seen activities are not seen activiti
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 2; Page 402-403; 678pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pathway in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 05-JUN-2001; 2001US-0296076F

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC sequence, where p53 function is restored), modulating (M3) a p53 pathway CC in a mammalian cell (comprising contacting the cell with an agent that CC specifically binds an HM polypeptide or mucleic acid) and diagnosing (M4) CC a disease in a patient (comprising: (a) obtaining a biological sample CC from the patient; (b) contacting the sample with a probe for HM CC expression; (c) comparison indicates a likelihood disease). (M1) is useful CC whether the comparison indicates a likelihood disease). (M1) is useful CC is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 * expression level.

CC Modulators identified by (M1) are useful in a variety of diagnostic and CC therapeutic applications, where disease or disorder prognosis is related CC to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell colliferation of stored (e.g. cancer). Another two new methods (M2 and CC M3) are useful for modulating the p53 pathway of a cell, thus restoring CC proliferation or progression through the cell undergoes normal CC also useful for treating defects in the p53 pathway such as angiogenic, CC apoptotic or cell proliferation disorders. (M2) and (M3) are Cell proliferation of special of the cell cycle. (M2) and (M3) are CC apoptotic or cell proliferation disorders. The present sequence CC represents a human p53 pathway modifying present

The polymucleotide sequence contains a deletion, leading to a truncated protein. Mutations or deletions in the parkin2 gene cause Parkinson's disease in humans. The human parkin2 gene is located in gene region 6q25.2-27. Parkin2 polypeptides and polymucleotides are useful for analysing neurodegenerative diseases. They are also useful for testing the efficacy of the treatment of a neurodegenerative disease such as Parkinson's disease, Alzheimer's disease, Huntington's disease, and service pick's disease, Prion disease, and secondary causes inducing Parkinson's syndromes like toxins, drugs, brain tumours, head trauma, stroke, vascular irregularities or metabolic irregularities, associated with a less active or non-active parkin protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       brain tumour; head trauma; stroke; vascular irregularity;
